

ANDROID

Sec:8

Eng. Rasha Sleem

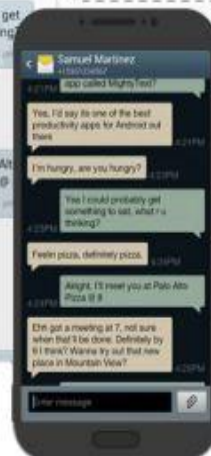

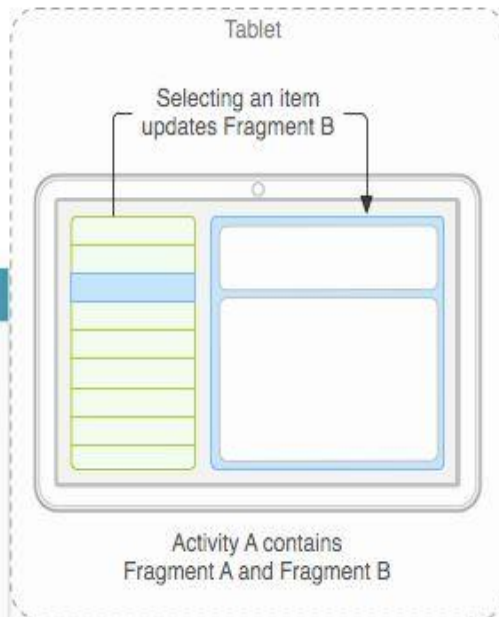

Fragment

- It represents a behavior or a portion of user interface in an Activity.
- It has its own **lifecycle**, receives its own input events, and which you can add or remove while the activity is running.
- You can combine multiple fragments in a single activity to build a multi-pane UI and reuse a fragment in multiple activities.

- A fragment must always be embedded in an activity and the **fragment's lifecycle** is directly affected by the host activity's lifecycle.
 - when the activity is **paused**, so are all fragments in it.
 - when the activity is **destroyed**, so are all fragments.
 - However, while an activity is **running** (it is in the resumed lifecycle state), you can manipulate each fragment independently, such as add or remove them.

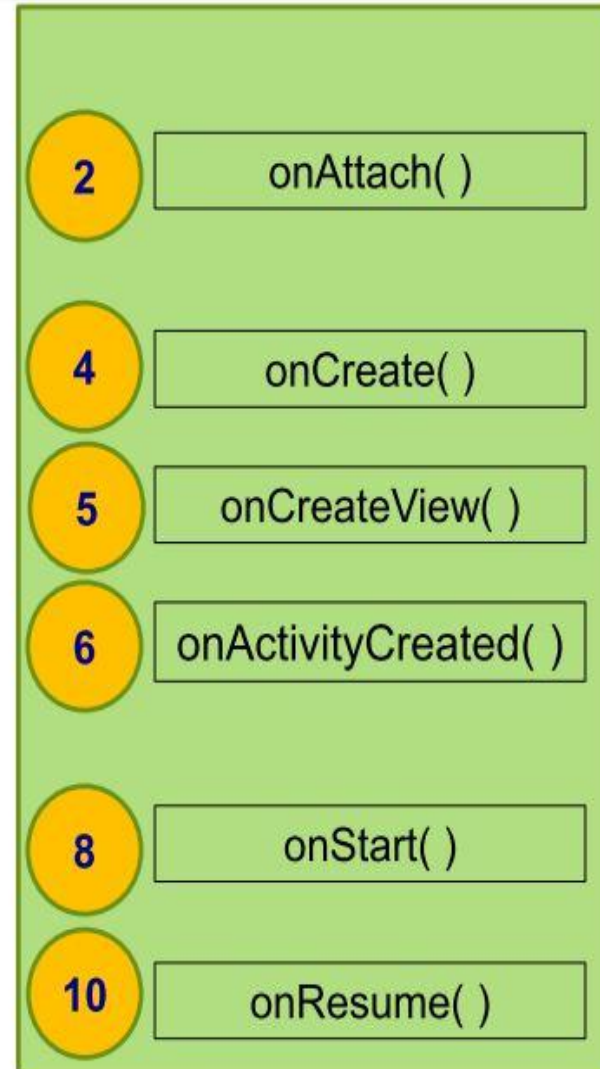

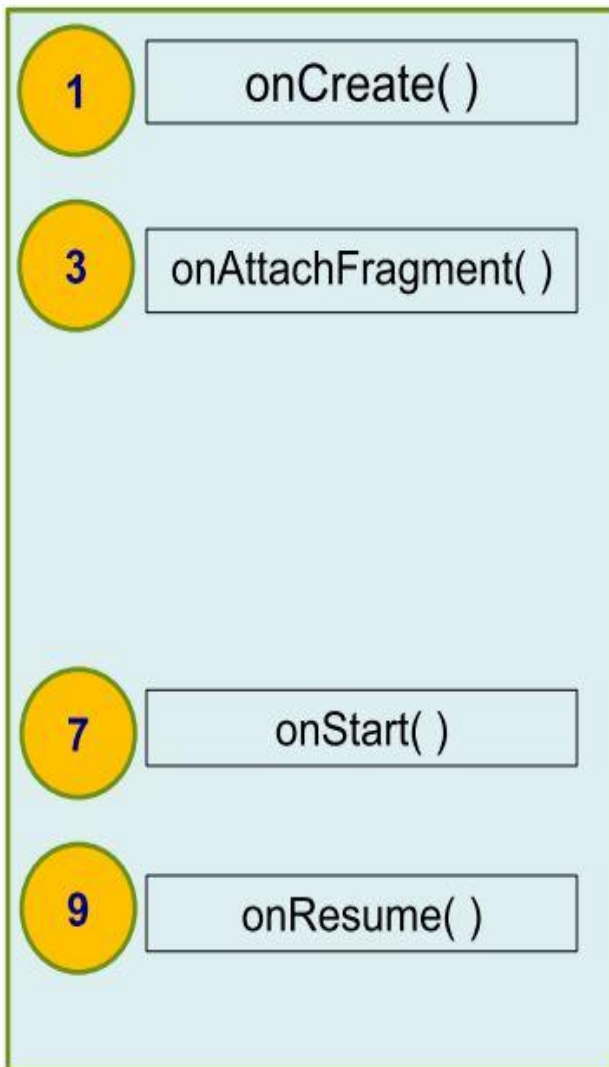

Example

SMS View

Activity vs. Fragment lifecycle

Creation

Destruction

2

onPause()

4

onSaveInstanceState()

6

onStop()

10

onDestroy()

1

onPause()

3

onSaveInstanceState()

5

onStop()

7

onDestroyView()

8

onDestroy()

9

onDetache()

Adding fragment to activity

- Two Ways to add Fragments to an Activity:
 1. Add **<Fragment>** to the **XML** Layout
 2. Add Fragment in **Java**

1-Static Fragment

- app → new → fragment → blank fragment

New Android Component

 **Configure Component**
Android Studio

Creates a blank fragment that is compatible back to API level 4.

Fragment Name:

☒ Create layout XML?

Fragment Layout Name:

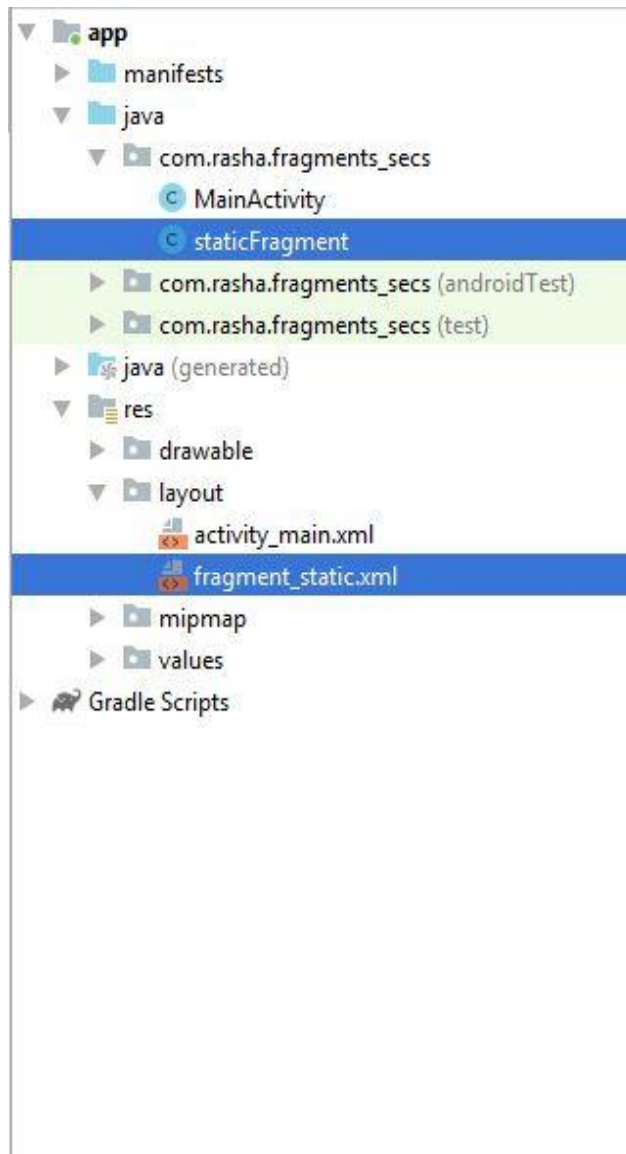

☒ Include fragment factory methods?

☒ Include interface callbacks?

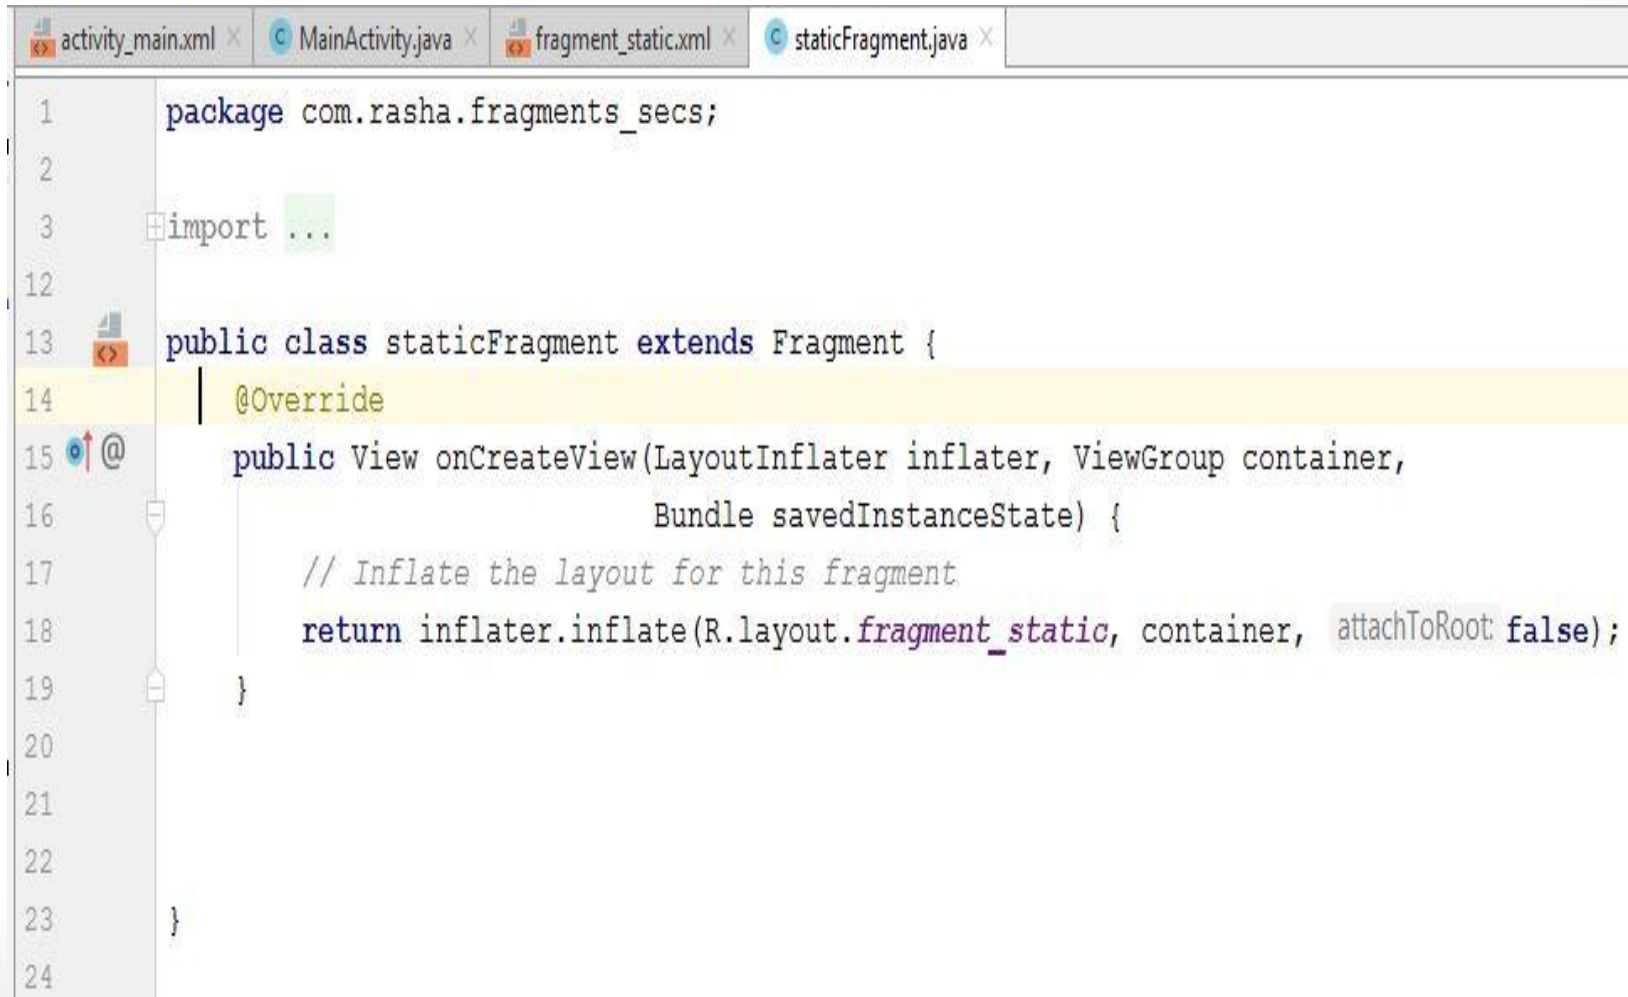

Source Language:

Target Source Set:

The name of the fragment class to create

staticFragment.java

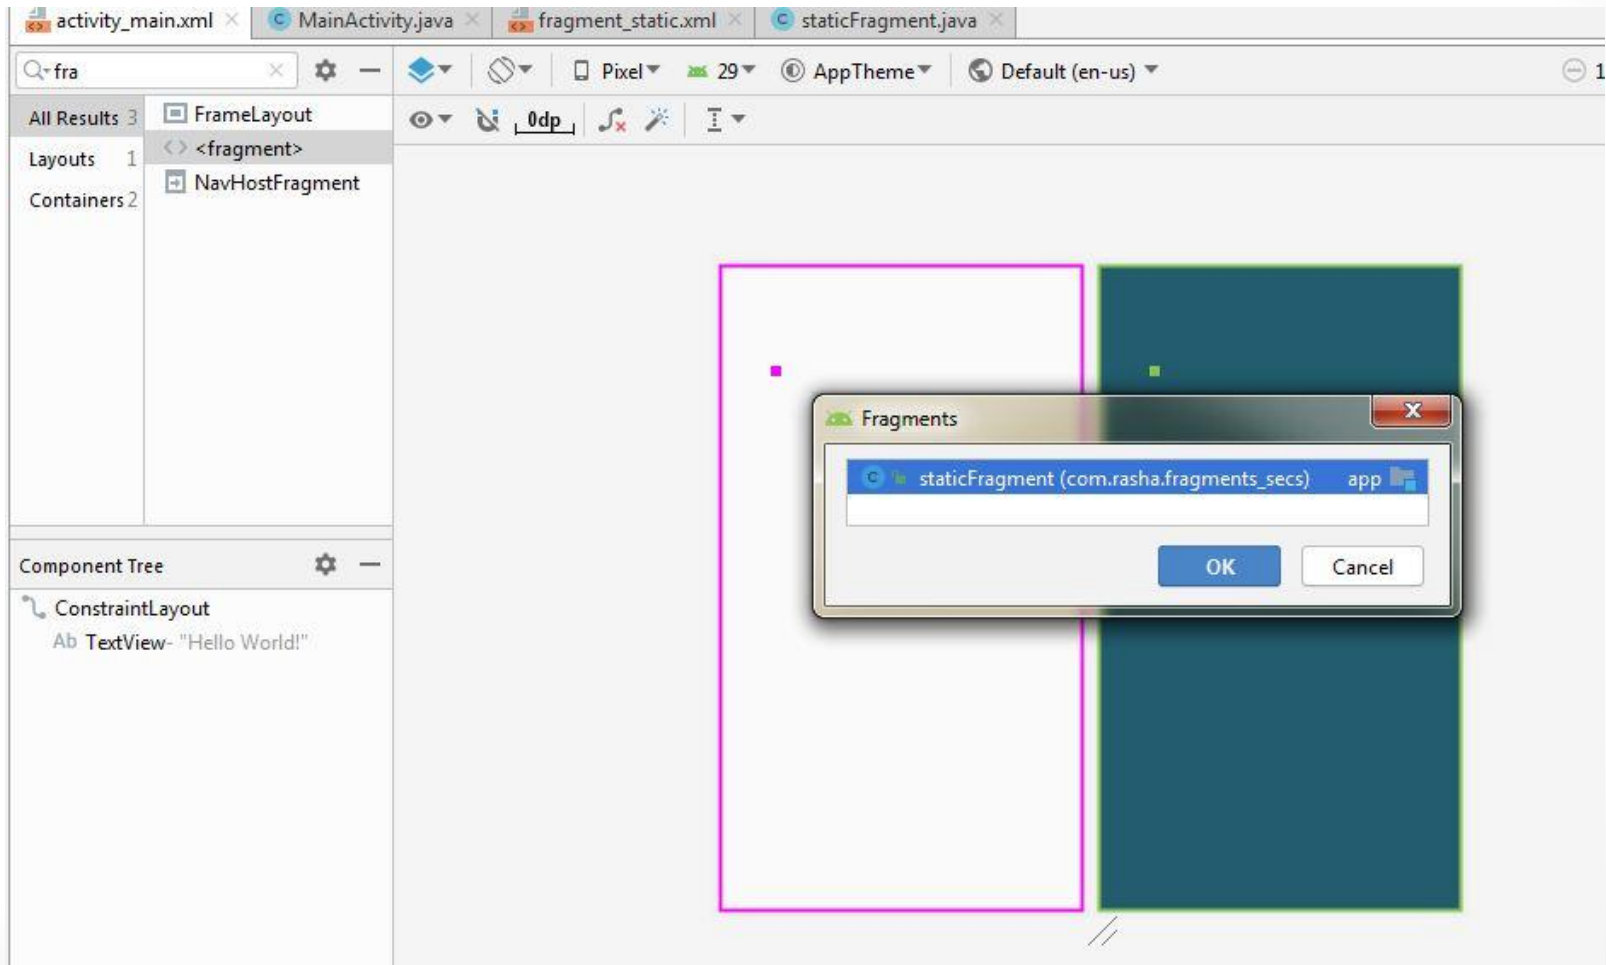

```
1 package com.rasha.fragments_secs;
2
3 import ...
12
13 public class staticFragment extends Fragment {
14     @Override
15     @ public View onCreateView(LayoutInflater inflater, ViewGroup container,
16         Bundle savedInstanceState) {
17         // Inflate the layout for this fragment
18         return inflater.inflate(R.layout.fragment_static, container, attachToRoot: false);
19     }
20
21
22
23 }
24
```

Fragment_static.xml

```
activity_main.xml x MainActivity.java x fragment_static.xml x staticFragment.java x
1      <?xml version="1.0" encoding="utf-8"?>
2      <FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
3                  xmlns:tools="http://schemas.android.com/tools"
4                  android:layout_width="match_parent"
5                  android:layout_height="match_parent"
6                  tools:context=".staticFragment">
7
8      <!-- TODO: Update blank fragment layout -->
9      <TextView
10         android:layout_width="match_parent"
11         android:layout_height="match_parent"
12         android:text="hello_static_fragment" />
13
14  </FrameLayout>
```

Adding fragment to activity

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent">

    <fragment
        android:id="@+id/fragment"
        android:name="com.rasha.fragments_secs.staticFragment"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintStart_toStartOf="parent" />

</androidx.constraintlayout.widget.ConstraintLayout>
```

2-Dynamic Fragment

app → new → fragment → blank fragment

New Android Component

 **Configure Component**
Android Studio

Creates a blank fragment that is compatible back to API level 4.

Fragment Name:

☒ Create layout XML?

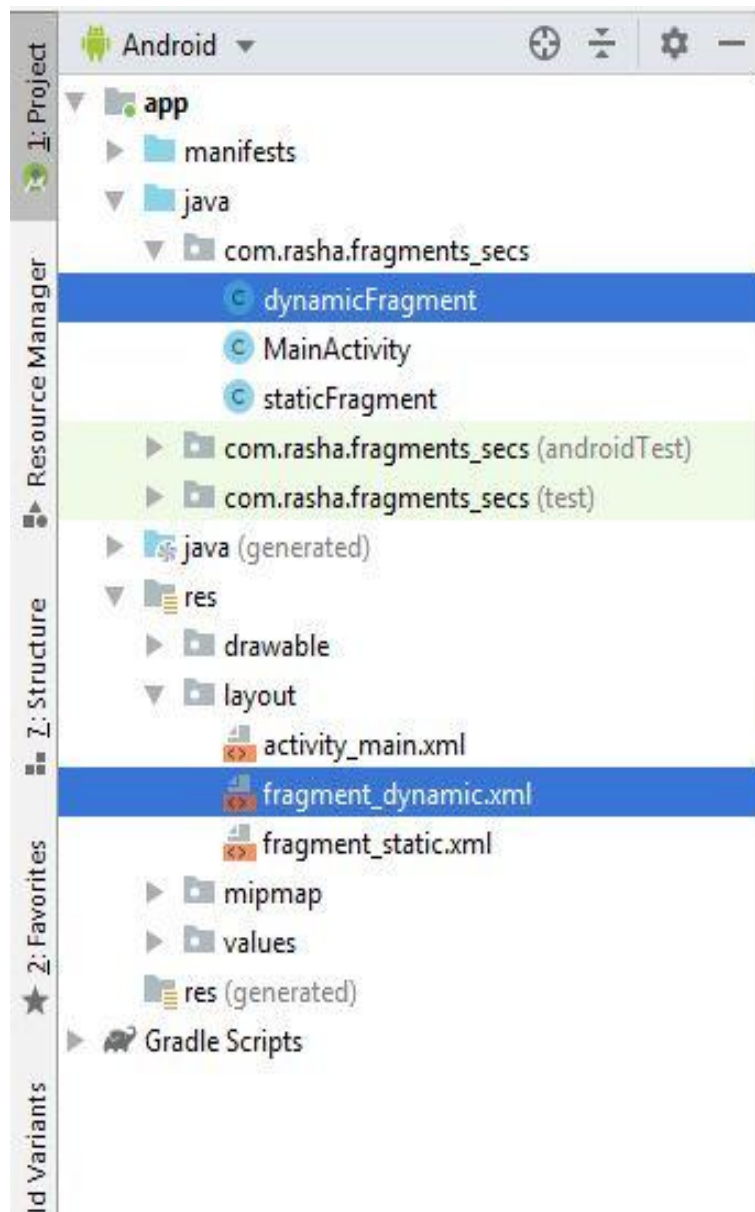

Fragment Layout Name:

☒ Include fragment factory methods?

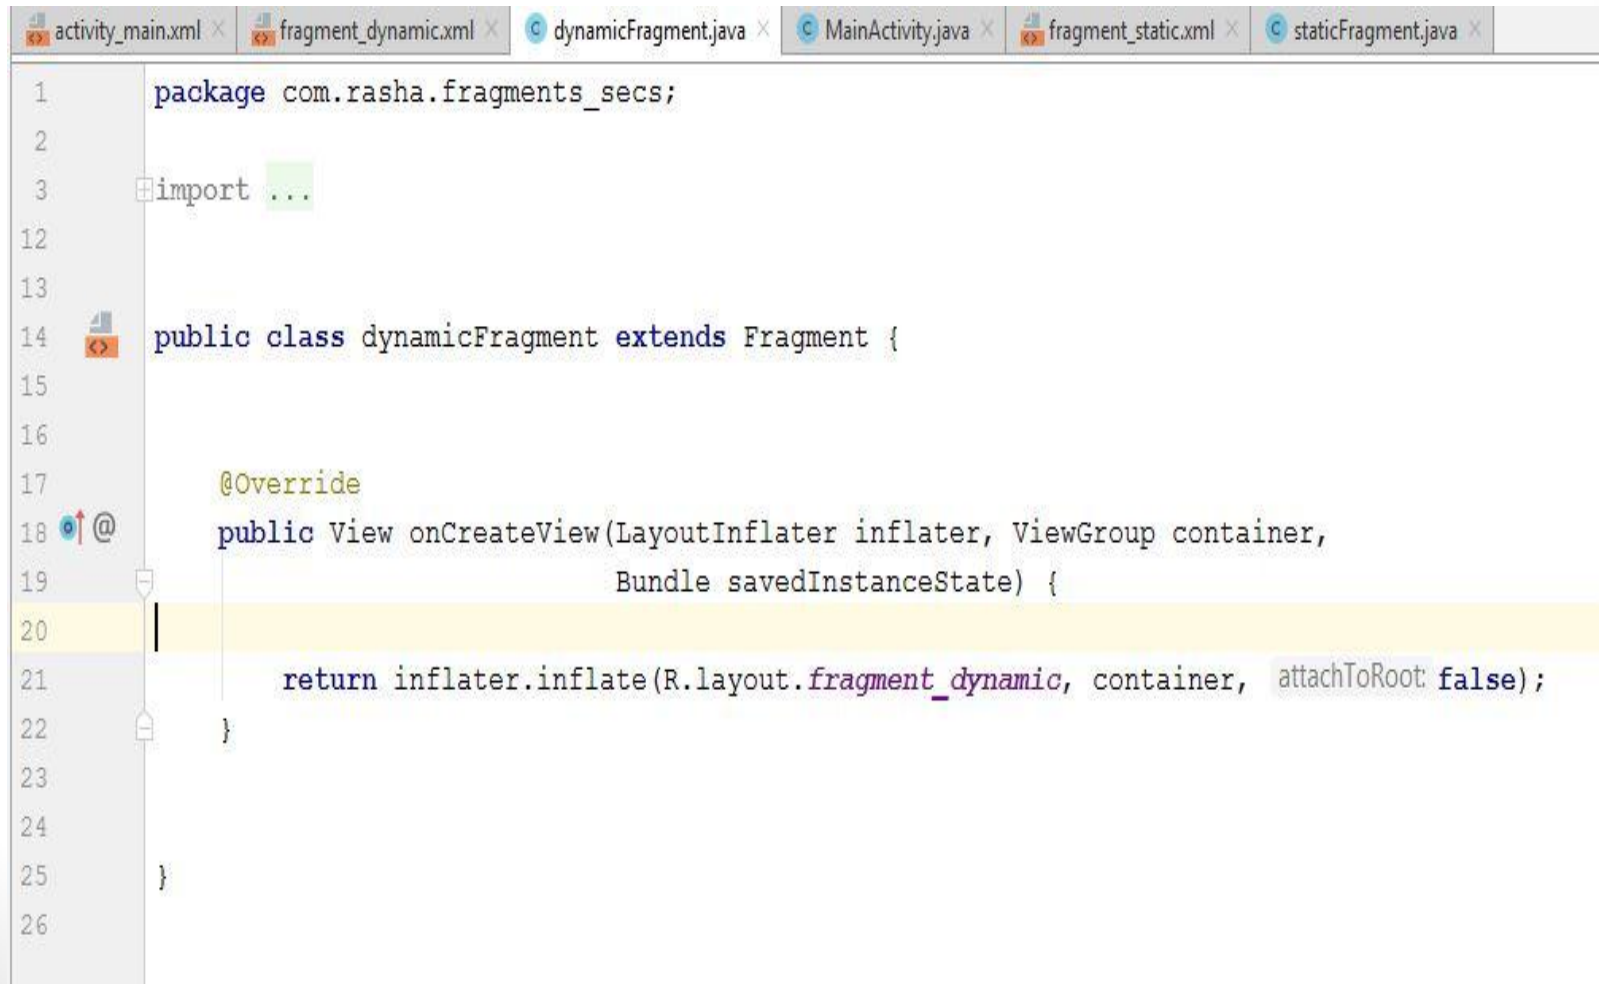

☒ Include interface callbacks?

Source Language:

Target Source Set:

Dynamic_fragment.java

```
1  package com.rasha.fragments_secs;
2
3  import ...
12
13
14  public class dynamicFragment extends Fragment {
15
16
17      @Override
18      public View onCreateView(LayoutInflater inflater, ViewGroup container,
19                              Bundle savedInstanceState) {
20
21          return inflater.inflate(R.layout.fragment_dynamic, container, attachToRoot: false);
22      }
23
24
25  }
26
```

Fragnmet_dynamic.xml

```
1  <?xml version="1.0" encoding="utf-8"?>
2  <FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
3      xmlns:tools="http://schemas.android.com/tools"
4      android:layout_width="match_parent"
5      android:layout_height="match_parent"
6      xmlns:app="http://schemas.android.com/apk/res-auto"
7      tools:context=".dynamicFragment"
8      android:background="#aef">
9
10
11      <ImageView
12          android:layout_width="wrap_content"
13          android:layout_height="wrap_content"
14          android:src="@mipmap/ic_launcher"
15          android:id="@+id/img"
16          android:layout_gravity="center"/>
17
18      <TextView
19          android:layout_width="wrap_content"
20          android:layout_height="wrap_content"
21          android:text="Dynamic Fragment"
22          android:layout_gravity="center_vertical"/>
23
24  </FrameLayout>
```

Design Text

Dynamic Fragment

Dynamic Fragment

activity_main.xml

```
activity_main.xml x fragment_dynamic.xml x dynamicFragment.java x MainActivity.java x fragment_static.xml x staticFragme

1  <?xml version="1.0" encoding="utf-8"?>
2  <androidx.constraintlayout.widget.ConstraintLayout
3      xmlns:android="http://schemas.android.com/apk/res/android"
4      xmlns:app="http://schemas.android.com/apk/res-auto"
5      xmlns:tools="http://schemas.android.com/tools"
6      android:layout_width="match_parent"
7      android:layout_height="match_parent"
8      tools:context=".MainActivity">
9
10
11  <Button
12      android:id="@+id/btn"
13      android:layout_width="match_parent"
14      android:layout_height="wrap_content"
15      android:text="show dynamic fragment"
16      app:layout_constraintBottom_toBottomOf="parent"
17      app:layout_constraintHorizontal_bias="0.0"
18      app:layout_constraintLeft_toLeftOf="parent"
19      app:layout_constraintRight_toRightOf="parent"
20      app:layout_constraintTop_toTopOf="parent"
21      app:layout_constraintVertical_bias="0.046" />
```

```
22  
23 <LinearLayout
```

```
24     android:layout_width="match_parent"
```

```
25     android:layout_height="match_parent"
```

```
26     android:layout_marginTop="80dp"
```

```
27     android:orientation="horizontal"
```

```
28     app:layout_constraintBottom_toBottomOf="parent"
```

```
29     app:layout_constraintEnd_toEndOf="parent"
```

```
30     app:layout_constraintStart_toStartOf="parent"
```

```
31     app:layout_constraintTop_toTopOf="parent">
```

```
32
```

```
33 <fragment
```

```
34     android:id="@+id/fragment"
```

```
35     android:name="com.rasha.fragments_secs.staticFragment"
```

```
36     android:layout_width="0dp"
```

```
37     android:layout_height="match_parent"
```

```
38     android:layout_weight="1" />
```

```
39
```

```
40 <FrameLayout
```

```
41     android:id="@+id/framelayout_id"
```

```
42     android:layout_width="0dp"
```

```
43     android:layout_weight="1"
```

```
44     android:layout_height="match_parent"/>
```

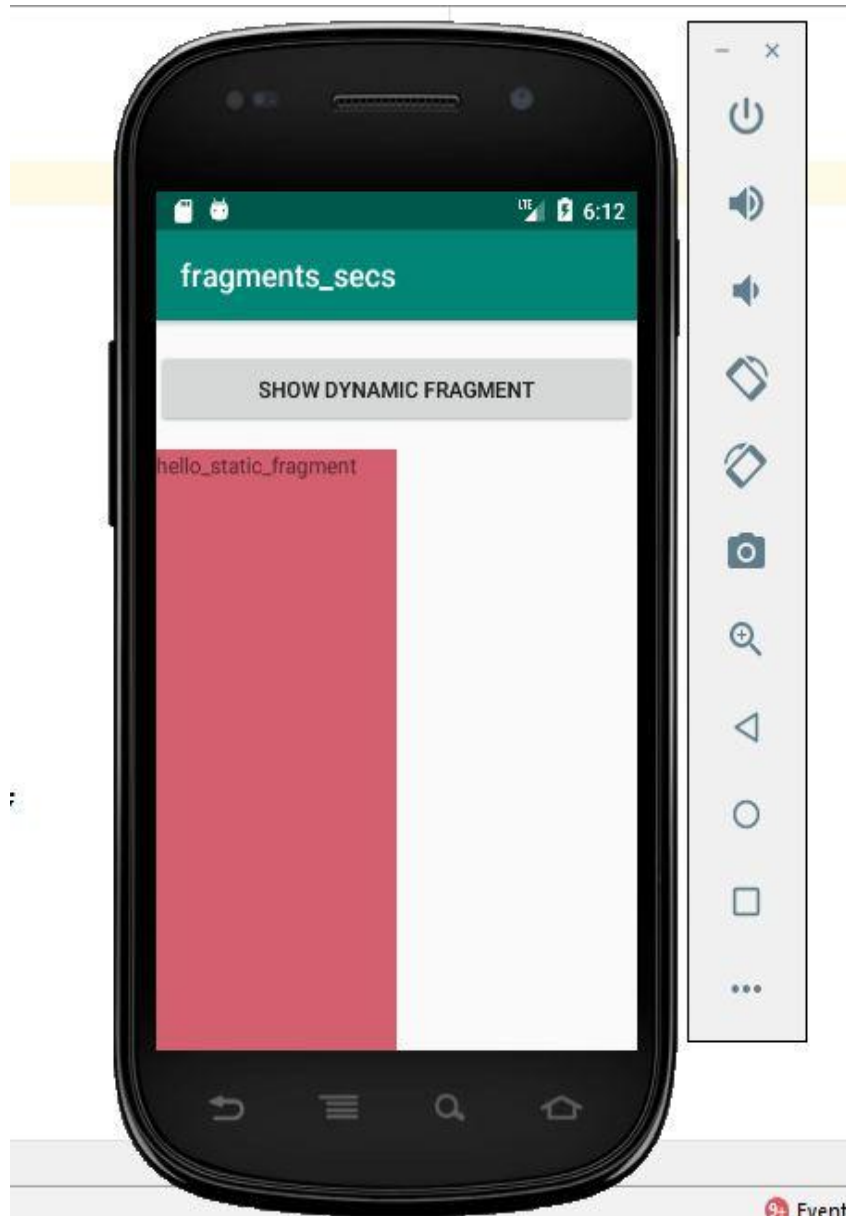

```
45 </LinearLayout>
```

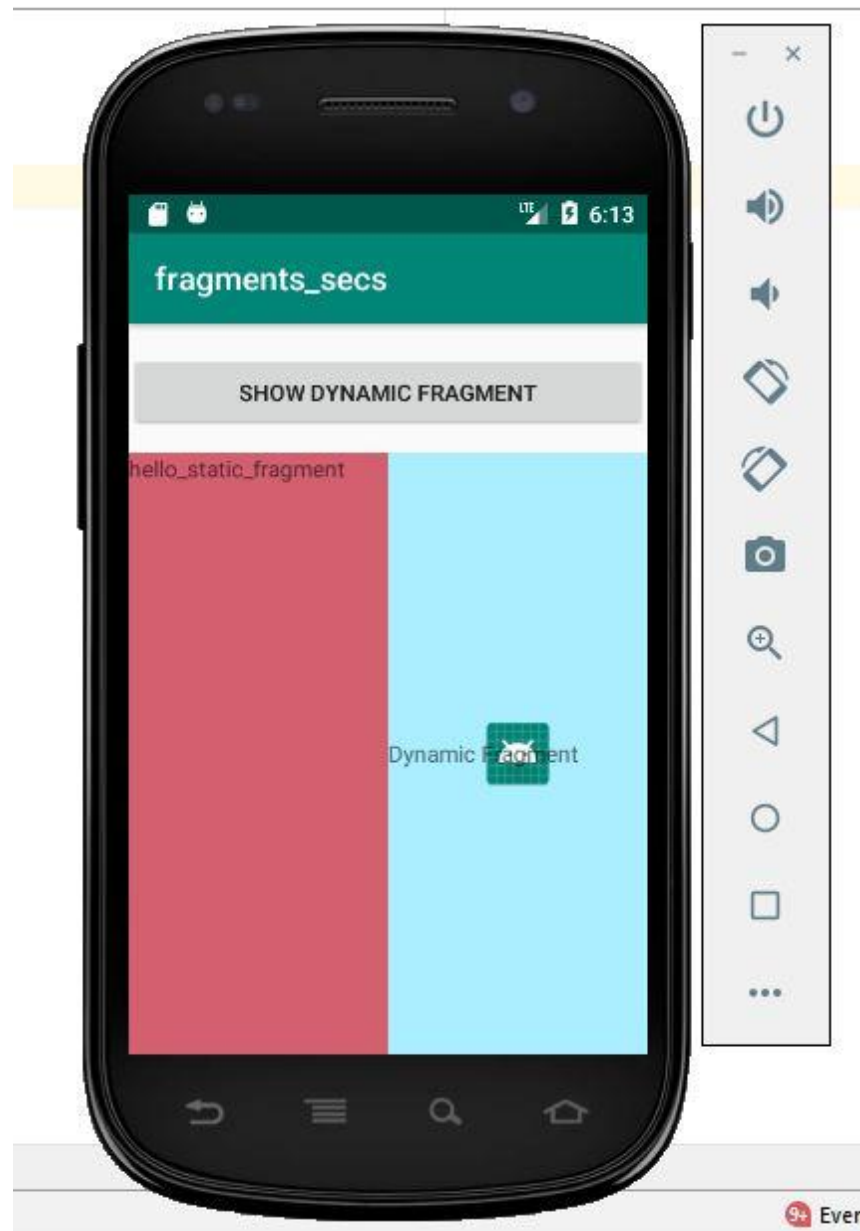

```
46 </androidx.constraintlayout.widget.ConstraintLayout>
```

androidx.constraintlayout.widget.ConstraintLayout > LinearLayout

Main_activity.java

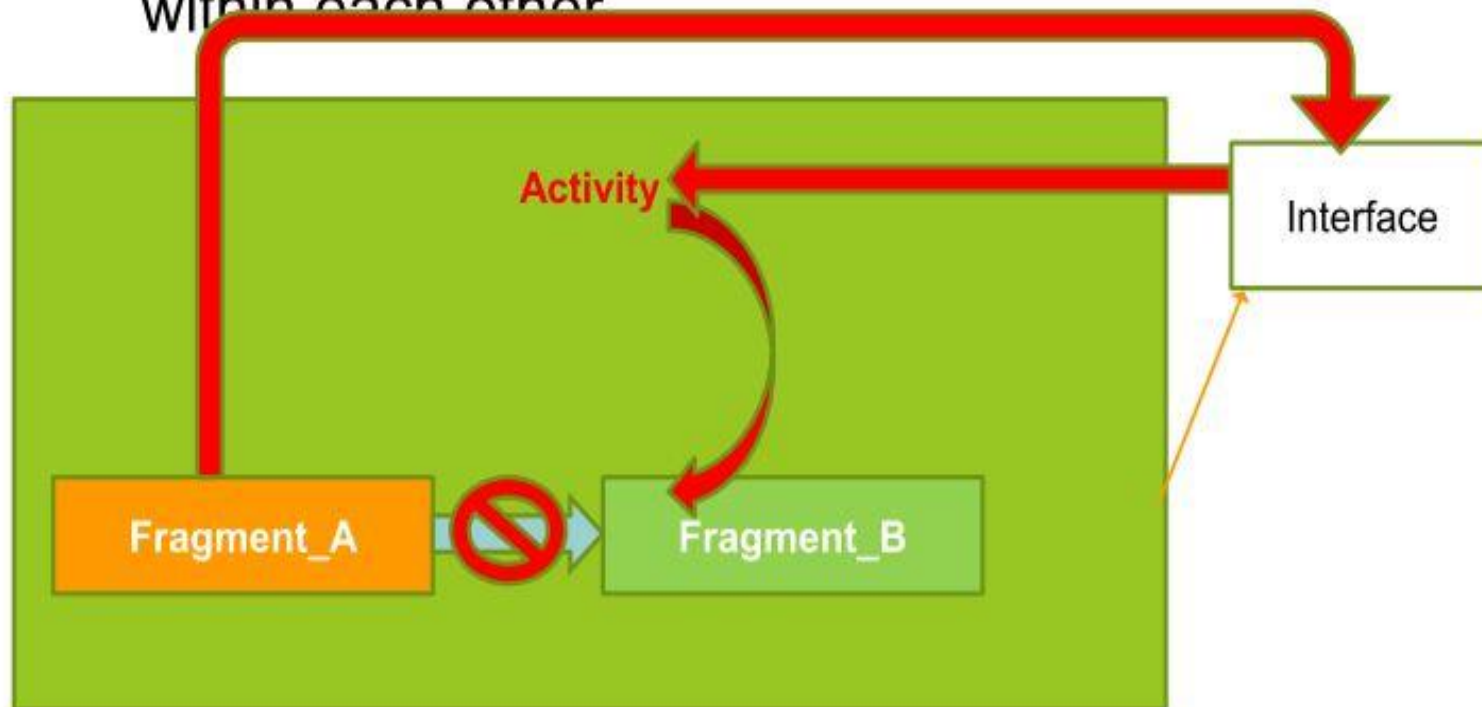

```
MainActivity.java x
11
12 public class MainActivity extends AppCompatActivity {
13
14     Button fragment_btn;
15
16     @Override
17     protected void onCreate(Bundle savedInstanceState) {
18         super.onCreate(savedInstanceState);
19         setContentView(R.layout.activity_main);
20
21         fragment_btn=findViewById(R.id.btn);
22
23         fragment_btn.setOnClickListener(new View.OnClickListener() {
24             @Override
25             public void onClick(View view) {
26                 dynamicFragment d_fragment=new dynamicFragment();
27                 FragmentManager f_manager=getSupportFragmentManager();
28                 FragmentTransaction f_trans=f_manager.beginTransaction();
29                 f_trans.add(R.id.framelayout_id,d_fragment, tag: "myFragment");
30
31                 f_trans.commit();
32             }
33         });
34
```

Inter fragment communication

- Fragments should be loosely coupled.
- Don't maintain direct reference of fragments within each other.

Communicator design pattern
